

With Facefront, say so long to buddy punching.

See and save detailed job site updates with Field Notes.

Field Oversight

FaceFront

Photo verification at clock-in

Dirty hands, lack of electricity and weather are major obstacles when using traditional biometric devices. In addition, many unions object to fingerprinting.

Our mobile time tracking app, ExakTime Mobile, lets you confirm workers' identities with FaceFront photo ID verification. When a worker clocks in and out on ExakTime Mobile, the front-facing camera of your mobile device will snap a photo.

FaceFront photos are sent to the cloud, so that bookkeepers and payroll managers can view them in real-time and compare them to employee master photos already stored in our workforce management software, ExakTime Connect.

Field Notes

Multimedia updates from the field

With today's technology, there is no reason to wait for updates from the field by word of mouth, handwritten reports or a phone call.

ExakTime Mobile employs the technology on your mobile device to allow workers or supervisors in the field to record text, audio or photo updates that are sent to the cloud with one click, for review now or later in our web-based software, ExakTime Connect.

Supply needs or purchases, equipment incidents or repairs, and much more can be easily conveyed with these multimedia updates, which appear on the ExakTime Connect dashboard and are also stored in connection with a worker or job site.

With the mobile form integration on ExakTime Connect, you have the option of making signing off a requirement for punching out, so they can't forget. Signatures can be obtained digitally and all of the information is backed up on the cloud.
